

# Stone Age Time Periods

9 The pre-historic period known as the Stone Age, which  
20 is said to have lasted for over three million years, was  
29 named because of the stone tools and equipment used  
40 at the time. The Stone Age is divided into three phases,  
50 although the exact dates for each section vary across the  
60 world. During the Old Stone Age, known as the Palaeolithic  
69 era, the earliest relatives of humans, homo habilis, used  
79 simple stone tools and Britain was still connected by land  
88 to modern-day France and Denmark. In the Mesolithic  
96 period (Middle Stone Age), the more developed humans  
105 lived hunter-gatherer lifestyles, constantly on the move in  
114 order to survive. At this point, Britain became an island.  
122 During the New Stone Age (Neolithic period), farming  
129 began, pottery was developed and villages were built.

Below are the answers from the text above, but what are the questions?

Read the text above and think about the types of questions the different reading dogs ask and then write what you think the 4 questions could be!

1.

**Palcolithic era.**

2.

**Mesolithic**

3.

**Accept any reasonable summary which includes the main point that the Stone Age was divided into three periods and is 20 words or less in length.**

4.

**Accept any reasonable difference from the text such as: 'Humans constantly moved in the Mesolithic period but settled in villages during the Neolithic period.'**
