

Maths Homework 18.3.19

Find fractions of the amounts:

You need to do **2 steps** to answer each if these questions.

STEP 1 - divide the number by the denominator (the bottom number) Use bus stop to work this out.

STEP 2 - multiply your ANSWER (from step 1) by the numerator (the top number) Use short multiplication to work this out.

Here's an example for you ☺

$$\frac{7}{9} \text{ of } 450 = 350$$

STEP 1

$$\begin{array}{r} 50 \\ 9 \overline{) 450} \end{array}$$

STEP 2

$$\begin{array}{r} 50 \times \\ \underline{\quad 7 \quad} \\ 350 \end{array}$$

$$\frac{3}{4} \text{ of } 160$$

$$\frac{2}{3} \text{ of } 150$$

$$\frac{5}{6} \text{ of } 240$$

$$\frac{3}{5} \text{ of } 450$$

$$\frac{3}{7} \text{ of } 280$$

$$\frac{2}{3} \text{ of } 165$$

$$\frac{3}{5} \text{ of } 195$$

$$\frac{4}{9} \text{ of } 270$$
