Find halfway between these numbers (remember to add them up and then halve your answer) I've done one for you to remind you!

1 -   130, 318

130 + 318 = 448 (I used place value addition)

```
            448
          /  |  \
       400   40   8
        |    |    |
       200   20   4
          \  |  /
            224
```
2 -   204, 422   3 -   612, 206   4 -   444, 216
Frog's bad day

Frog has had a bad Day. He has been getting answers wrong. Tick where he got an answer right. Circle where he made a mistake, so he can see where he went wrong.
**5**   473 – 426 = 77   70 + 4 + 3 = 77

```
        4                70                        3
   |----⌒----|················⌒················|--⌒--|
  426      430                              470   473
```

6   582 – 537 = 45   40 + 3 + 2 = 45

```
        3                40                        2
   |----⌒----|················⌒················|--⌒--|
  537      540                              580   582
```

7 855 – 816 = 4I
30 + 6 + 5 = 4I

6   30   5

816   820   850   855

8 694 – 635 = 58
50 + 5 + 4 = 58

5   50   4

635   640   690   694

Frog's big jump

473   694   855   537   635   816   582   426
9 Frog is feeling better! Draw a jotting to help him work out the difference between the smallest number on the cards and the biggest number. It is quite a jump!
