

Oaks begin producing seeds, called acorns, at some point after reaching 20 years of age and before 50. Acorn production occurs during the fall and varies in numbers from year to year. After oaks reach 100 years, they will begin to produce an average of 2200 acorns yearly.

Friday 11th October 2019

Dear Parents/Carers,

At St Peter and St Paul Catholic Primary Academy the classes have names. The Early Years Class is called the Acorn Class. We would like the children to find out a little information about acorns. Acorns grow on oak trees.

Homework:

*Talk about oak trees with your child. To promote speaking and listening, we would like your child to discuss the information with you, there is no need to write down the facts. It is important for the children to practise their speaking and listening skills.

*Look at pictures in a book/internet of oak trees/acorns.

*Help your child to make a large picture of acorns on an oak tree. This could be a creative collage or painting. Your child could use a variety of materials to create an oak tree. We would like the children to be as creative as possible!

We are sure that the children will enjoy this creative challenge. The children's work will be displayed in the classroom. This homework needs to be handed in on Monday morning.

Many thanks for your support.

Kind regards,

Mrs Sanford and Miss Williamson
