

Maths

Today, we're going to use a **function machine** to help with multiplication.

A function machine is where you put a number in (the **Input**), then you multiply it by another number (the **Function**) to get the answer (the **Output**).

So, in this example the input was 6; this was then multiplied by the function 2 which then produced the output of 12.

Another way of showing that is:

Input	Function	Output
6	$\times 2$	12

In your home learning book write out and then work out the outputs (answers) to these questions (perhaps on a piece of scrap paper create your own function machine).

These are inputs for the $\times 3$ machine. Write the outputs.

1 6

3 12

5 7

2 8

4 10

Here are outputs from the $\times 3$ machine. Write the inputs.

6 9

7 24

8 27

9 15

10 33

These are inputs for the $\times 4$ machine. Write the outputs.

11 5

13 9

15 11

12 3

14 12

Here are outputs from the $\times 4$ machine. Write the inputs.

16 16

17 32

18 48

19 400

20 80
