

# History

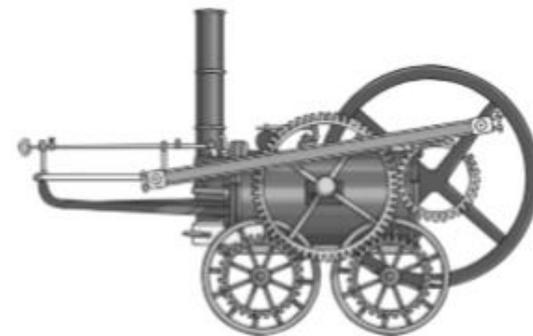

For our new topic we are looking at transport, and railways in particular. For the first activity, I'd like you to look at the pictures below and read the captions about each one. Once you have done this, in your home learning book, number the order you think they came in, with number 1 being the earliest (oldest). If you are unable to print this sheet off just imagine that the top left picture is A, the one next to it is B and so on with the last one (bottom right, horse and cart) being F.

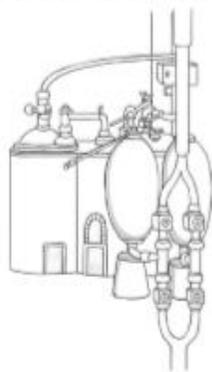

George Stephenson's Locomotion No.1 was the first locomotive to run on a passenger carrying line.

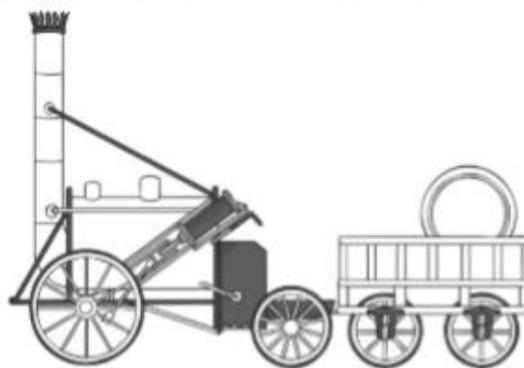

William Hedley's Puffing Billy was used to pull coal wagons. It was a very reliable engine and was in use for over 50 years.

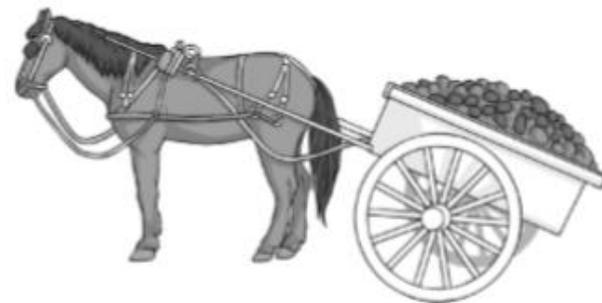

Richard Trevithick's unnamed locomotive carried 10 tons of iron over a distance of 16km at the Pen-y-Darren Ironworks in Wales.

Thomas Savery's steam engine was used to pump water out of the coal mines.

George Stephenson's Rocket was the winner of the Rainhill Trials.

The first railroads were in the coal mines. Horses pulled carts of coal along these tracks.
