

Today, I want you to get **really** good at using the **grid method** so we're going to reinforce our learning from yesterday by doing a few more multiplication calculations using the grid method.

Remember how this worked from yesterday:

$$26 \times 3 =$$

Using the grid method to help us work it out (we split the tens and the units):

	Tens	Units
X	20	6
3		

So first, work out $20 \times 3 = 60$

and then work out $6 \times 3 = 18$

X	20	6
3	60	18

But then we combine the answers.

$$60 + 18 = 78$$

$$\text{So, } 26 \times 3 = 78$$

In your home learning books, write out the calculations and then use the grid method to work out the answers to these multiplication calculations:

Using the grid method

1. $24 \times 5 = \square$

2. $32 \times 4 = \square$

3. $5 \times 15 = \square$

4. $3 \times 23 = \square$

5. $26 \times 4 = \square$

6. $5 \times 18 = \square$

7. $5 \times 32 = \square$

8. $32 \times 3 = \square$

9. $17 \times 4 = \square$

10. $8 \times 14 = \square$

11. $4 \times 36 = \square$

12. $16 \times 8 = \square$

13. $8 \times 27 = \square$

14. $4 \times 28 = \square$

15. $26 \times 3 = \square$

16. $35 \times 5 = \square$
