

Maths

Today, we're going to take a look at weights with grams (g) and kilograms (kg).

$$1 \text{ kg} = 1,000 \text{ g}$$

Your task today - in your home learning book, complete the questions from the page below.

Each of the small cans on the scales weigh 100g (it's not that easy to see I'm afraid).

Have a go at the THINK if you want a further challenge.

Grams and kilograms

Write the weight of each object.

THINK

Your bag cannot weigh more than 1 kg. What objects from above could you put in it?

Estimate the weight of these items in grams or kilograms.
