

Maths

Today, we're going to do some further work with grams (g) and kilograms (kg).

$$1 \text{ kg} = 1,000 \text{ g}$$

You would measure light objects using grams (g) and heavy objects using kilograms (kg).

So, if I wanted to measure the weight of 10 paper-clips I would use grams (g) as they are pretty light. Whereas, if I wanted to measure the weight of 10 watermelons, I would use kilograms (kg) as they would be really heavy.

Your task today - in your home learning book, complete the questions from the page below.

Write whether each of these should be measured in grams or kilograms.
