Watch this video via this link and then, in your home learning book, answer the questions fully below.

https://www.youtube.com/watch?time_continue=40&v=yXCeuSiTOug&feature=emb_title

1. Describe what a magnetic field is?
2. What happens when a magnetic object enter a magnet's magnetic field?
3. Name two metals that are attracted to magnets?
4. What happens when you bring the North pole of two magnets together?

5. If you break a magnet does it lose its magnetic properties?
6. True or false - magnets (if they are strong enough) can work under water?

Top tip: Attract = pulls towards

Repel = pulls away
