

Maths

Today, we are going to look at lots of different questions which involve fractions and some that don't! You may need a sheet of scrap paper or two to help work out some answers.

Play the PowerPoint (attached to our blog),

Click on Slide show (as below):

Then, click on From Beginning (as above):

The PowerPoint shows a few questions on each slide.

In your home learning book, write Slide 1, number 1 and then copy the calculation and work out your answer, then go on to the next question Slide 1, number 2. Once you have finished that slide, do the same on the next slide, so Slide 2, number 1 and so on.

If you can't answer one (and some are tricky so don't worry if that happens) then move onto the next one, but don't rush, allow yourself some thinking time first.

The final 3 slides show the answers so you can see how you did.

Best of luck!
